

# CIO Advisory

Explore an Advisory career within this team of 250+ professionals nationwide

## What we do

We help clients strengthen their Technology function to become high-performing organizations and drive business value.

## How we deliver

Working with clients across diverse industries and functions, we:

- Reimagine the future IT operating model required to deliver at market speed
- Rethink the nature of “how” technology work is performed, “who” should do it, “where” it should be done, and “what” investments will make the most meaningful impact
- Architect and implement next-generation enterprise systems

## Where we've made an impact

We've assisted chief information officers (CIOs) in effectively running their IT organizations by implementing operating models, processes, and technologies. This includes identifying best-fit technologies and applications for the entire organization while mitigating IT risks and costs. For example, we assisted a leading global technology company with a holistic IT transformation for future-ready strategy, design, and implementation. This included business partnering, architecture, solution development, service delivery, organizational change & communication, and performance management.

## Who we hire

Candidates pursuing a bachelor's or master's degree in management information systems, business, management, computer science, engineering, analytics, or a related field

## Ways we work

We work in a fast-paced and cross-functional team setting with significant opportunities to travel to client locations and interact with C-suite executives.

**IT leaders have the capacity to win on every meaningful business measure. With our tools and insights, we can help them.**
